Transformation Geometry 3

Memo

On the cartesian plane below, draw in the line $y = x$

- 1a. Plot point A at $(-8; -3)$
- b. Reflect point A across line $y = x$
- c. What would the name of the image be?
 A'
- d. What would the co-ordinates of the image be?
 $(-3; -8)$

WorksheetCloud

2a. On the same cartesian plane that was used in (1) plot point B at (2; 5)

b. Reflect point b across line $y = x$

c. What would the name of the image be?

B¹

d. What would the co-ordinates of the image be?

(5; 2)

3a. On the same cartesian plane that was used in (1) plot point C at (3; 1)

b. Reflect point b across line $y = x$

c. What would the name of the image be?

C¹

d. What would the co-ordinates of the image be?

(1; 3)

4a. Join the points to their images, using a blue pen.

b. Are the lines perpendicular to the line $y = x$

Yes

c. Is each point and its image the same distance away from the line $y = x$

Yes

5. Answer the following:

a. Point D is at (6;2). What are the co-ordinates of D¹ if it is reflected across the line $y = x$.

(2;6)

b. Point E (-8; 2) is reflected across the line $y = x$ to give image E¹. What would the co-ordinates of E¹ be?

(i) (8; -2)

(ii) (-2; 8)

(iii) (2; -8)

(iv) (-8; 2)

(iii) (2; -8)
