## Grade 5

### Maths

#### Bar Graphs

1. You collected information on what sold the most at the school tuckshop and the following graph was

created.

- Fill in the three things that are missing from this graph. **Heading, Names for each axis – yours do not need to be the same, you just need to have seen what was missing and written them down.**
  - What was the most popular item at the tuckshop? **Chips**
  - What was the least popular item at the tuckshop? **Sweets**
  - How many cooldrinks did the tuckshop sell? **15**
  - How many chocolates did the tuckshop sell? **18 (17 accepted as correct as well)**
2. Your class did a survey of how everyone got to school and drew up the following graph.

- How many students use public transport to get to school? **11 (Bus 4, train 5, taxi 2)**
- How many students take the train? **5**
- If this is everyone on the class, how many students are there in the class? **29**
- At least how many students probably live close to the school? **At least 8 (we don't know the private cars, bus, train or taxi children, but if you ride or walk, you probably live close to school)**
- Do you think that this survey was done in the rainy season or the dry season? **The dry season (those that walked or rode would probably find a different way to get to school in the wet season)**
