

Breaking Down Method

Subtracting

Calculate the following using the breaking down method:

$65 - 32 = \square$

$T: 60 - 30 = 30$

$U: 5 - 2 = 3$

$30 + 3 = 33$

$126 - 14 = \square$

$H: 100 - 0 = 100$

$T: 20 - 10 = 10$

$U: 6 - 4 = 2$

$100 + 10 + 2 = 112$

Borrow from the 10's row to complete the following:

$62 - 35 = \square$

$T: 60 - 30 = ~~30~~ 20$

$U: 12 - 5 = 7$

$20 + 7 = 27$

$73 - 55 = \square$

$T: 70 - 50 = ~~20~~ 10$

$U: 13 - 5 = 8$

$10 + 8 = 18$

$146 - 27 = \square$

$H: 100 - 0 = 100$

$T: 40 - 20 = ~~20~~ 10$

$U: 16 - 7 = 9$

$100 + 10 + 9 = 119$

$156 - 138 = \square$

$H: 100 - 100 = 0$

$T: 50 - 30 = ~~20~~ 10$

$U: 16 - 8 = 8$

$10 + 8 = 18$

Borrow from the 10's row to complete the following:

$132 - 56 = \square$

$H: 100 - 0 = ~~100~~ 0$

$T: 130 - 50 = ~~80~~ 70$

$U: 12 - 6 = 6$

$70 + 6 = 76$

$145 - 68 = \square$

$H: 100 - 0 = ~~100~~ 0$

$T: 140 - 60 = ~~80~~ 70$

$U: 15 - 8 = 7$

$70 + 7 = 77$
